
Dextera API — Complete Documentation

Base URL: <https://8000-01ke9hsffzevnjzywv4gx41ax2.cloudspaces.litng.ai>

1. Chat Interface

Method: POST

Endpoint: /api/v1/chat

Request Body

JSON

```
{
  "message": "What is the punishment for theft?",
  "conversation_id": "conv_abc123",
  "use_rag": true,
  "document_context": null
}
```

Field Definitions

Field	Type	Required	Description
message	string	Yes	The user's query.
conversation_id	string	Yes	Unique ID generated by the Java backend.
use_rag	boolean	Yes	Set to true for database searching.
document_context	string	No	The summary text from /summarize for PDF discussion.

Configuration Logic

- **Normal Legal Question:** Set use_rag: true.
- **Simple Greeting:** Set use_rag: false.
- **Discussing Uploaded PDF:** Set use_rag: false and provide document_context.

Streaming Response (SSE)

The response is returned as text/event-stream. Append data to your UI as it arrives.

Event Data	Action
data: <word>	Append word to the chat bubble.
data: --RELEVANT JUDICIAL PRECEDENT--	Switch to displaying the Case Law section.
data: [DONE]	Stream complete.
data: ERROR: <message>	Terminate and show error.

2. Summarize PDF Document

Method: POST

Endpoint: /api/v1/summarize

Content-Type: multipart/form-data

Query Parameters

Parameter	Type	Required	Description
conversation_id	string	Yes	Summary will be saved to this specific history.

Success Response (200 OK)

JSON

```
{
  "filename": "PPC_section_302.pdf",
  "summary": "***Document Type:** Pakistan Penal Code...",
  "document_length_chars": 15420,
  "conversation_id": "conv_abc123",
  "saved_to_conversation": true
}
```

Implementation Note

After receiving a success, if the user engages in "Document Mode," you must pass the summary string back to the /chat endpoint in the document_context field.

3. Conversation Management

Get History

Method: GET

Endpoint: /api/v1/conversation/{conversation_id}

Message Types:

- **text:** Standard user/assistant chat bubbles.
- **document_summary:** Display as a special **Summary Card** in the UI with a "Discuss this Document" button.

Delete History

Method: DELETE

Endpoint: /api/v1/conversation/{conversation_id}

4. Operational Flows

Normal Chat Flow

1. **ID Generation:** Java backend creates a unique conversation_id.
2. **Request:** Flutter sends message with use_rag: true.
3. **UI:** Words are rendered in real-time using the SSE stream.

4. **Context:** The API automatically maintains a sliding window of the last 6 messages.

PDF Discussion Flow

1. **Upload:** User uploads PDF via /summarize.
2. **Display:** Flutter displays the returned summary in a formatted card.
3. **Toggle:** User taps "Discuss."
4. **Contextual Chat:** Flutter sends subsequent chat requests with use_rag: false and the summary text included in document_context.

5. Error Reference

Status	Error Detail	Meaning
400	Only PDF files are accepted.	File format mismatch.
422	Not a Pakistani law document.	AI validation failed (document out of scope).
404	Conversation not found.	Invalid or deleted conversation_id.
500	Server error.	Internal processing failure.
